<u>Amendments to the Specification:</u>

Please replace the paragraph beginning on page 3, line 14 with the following amended paragraph:

A1

Other network resources 4 do not include a resource storage device 12. Where not all resources 4 include a resource storage device 12, server 10 is required. Server 10 includes a server storage device 16 for storing a list of resources 17 [[4]] and GRL tags 14. Server storage device 16 is any device for storing data. Server storage device 16 may be any type of storage media such as magnetic, optical, or electronic storage.

Please replace the paragraph beginning on page 3, line 20 with the following amended paragraph:

A2

GRL tag 14 is a string that includes at least a description of the physical location of resource 4. Preferably, GRL tag 14 may take any form so long as the form is uniform throughout network 6. It is desirable that GRL tag 14 be small as it may reside on resource storage device 12 [[14]] where storage space is often limited. In one embodiment, GRL tag 14 takes the form {{GRL}}[sys]xxx[coord]yyy[label]zzz where {{GRL}} is a prefix, xxx is a coordinate system, yyy is the coordinate, and zzz is a label. It is desirable that the prefix {{GRL}} always be the first string in the GRL tag. Placing the prefix first in the tag allows for quick differentiation between GRL tags and other types of tags, such as uniform resource locator (url) tags.
